DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/29/2008 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Keith Mullervy on 11/10/2008.

The application has been amended as follows:

5. (Currently Amended) A system, comprising: a network node connected at least to a first base station and a second base station; user equipment connected to at least one of said first or said second base stations; a transmitter configured to transmit packet data units for unacknowledged mode services in a handover between base stations in a

mobile communications network in an acknowledged mode radio link control entity between a transmitting side and a receiving side;

a retransmission buffer configured to buffer the packet data units;

a setting device configured to set a retransmission parameter so that the packet data units are not retransmitted to said first base station when receiving positive or negative status reports for the packet data units from said receiving side;

a receiver configured to receive the status reports for the packet data units from said receiving side; and

a management device configured to purge from said retransmission buffer all the packet data units for which positive or negative status reports have [not] been received and to schedule remaining packet data units in said retransmission buffer for transmission to said second base station,

wherein said transmitter is configured to transmit said scheduled packet data units to said second base station.

9. (Currently Amended) An apparatus, comprising: a transmitter configured to transmit packet data units for unacknowledged mode services in a handover between base stations in a mobile communications network in an acknowledged mode radio link control entity between a transmitting side and a receiving side;

a retransmission buffer configured to buffer the packet data units;

a setting device configured to set a retransmission parameter so that the packet data units are not retransmitted to said first base station when receiving positive or negative status reports for the packet data units from said receiving side;

a receiver configured to receive the status reports for the packet data units from said receiving side; and

a management device configured to purge from said retransmission buffer all the packet data units for which positive or negative status reports have [not] been received and to schedule remaining packet data units in said retransmission buffer for transmission to said second base station,

wherein said transmitter is configured to transmit said scheduled packet data units to said second base station.

Allowable Subject Matter

3. Claims 1, 3-5, 7-9, and 11-13 are allowed.

Regarding Claim 1, Nevo et al. (US 6,813,256), Wei et al. (US 6,987,780), and Yi et al. (US 7,356,146) do not teach, alone nor in combination, the combination of:

setting a retransmission parameter so that the packet data units are not retransmitted to said first base station when receiving positive or negative status reports for the packet data units from said receiving side;

buffering the packet data units in a retransmission buffer;

receiving status reports for the packet data units from said receiving side; and

purging from said retransmission buffer all the packet data units for which positive or negative status reports have not been received;

scheduling remaining packet data units in said retransmission buffer for transmission to said second base station, and

wherein said transmitter is configured to transmit said scheduled packet data units to said second base station.

Claims 5, 9, and 13 are allowed for similar reasons as claim 1.
